# PLEASE READ IF YOU ARE UPDATING AVADA. USE THE GUIDE IN RED TO SEE WHICH VERSION PERTAINS TO YOU.

• **If you are using Avada v1.1.2 or earlier, then please read all the below info very carefully.**

• **If you are using Avada 2.0 to 2.0.4, then please read #3-7**

\* **If you are using Avada 2.0.5 or higher, then please read #4-7**

\* **If you are using Avada 2.1.3 or higher, then please read #6-7**

\* **If you are using Avada 3.0 already, then there is noting to note**

## 1. Theme Options Reset - The options reset will happen automatically for those updating from a 1.0.x version, but in some cases you need to hit "Options Reset" in theme options. If you have custom CSS or other code entered in theme options, it will be removed upon updating. Please back it up by copying it into a regualr text file before updating.

## 2. Legacy Slideshows - Avada has a new method for creating post slideshows, it uses multiple featured image boxes. This method will be selected by default. Any slideshow post you have made will need to be remde. Or if you prefer the old method, you can enable it again on the **"Slideshows"** Tab, just check the **"Legacy Posts Slideshows"** box.

## 3. Plugins - Now Integrated! - All plugins we include are now fully integrated into the theme. If you are on v2.0.4 or older, a script is going to automatically run. **You will get a Fatal Error or White Screen, this is normal. Simply refresh the page and the script will complete** and the new integrated plugins will be active & the old plugins will be de-activated. You should delete the 4 old plugins via FTP ( wp-content > plugins ), do not attempt to activate old ones.

## 4. Twitter & Flickr Widgets - If you are using Avada 2.1 or lower, you will need to reset your flickr & twitter widgets. The API's have changed. Please refer to the "Custom Widgets" section of our documenation for steps & a video tutorial

## 5. Widgets Will Become Inactive - Upon updating to v2.1.3 or higher, your widgets will drop out of your sidebars and go into the Inactive boxes. They are not deleted, you simply need to drag & drop them back into your sidebars.

## 6. Options Reset Recommended - **Please make sure you backup your custom CSS, google tracking code, and any other code you have in theme options because it will be deleted when you click options reset.** Due to over 100 new theme options, its recommended that you click "options reset" so the new options are set to the default values. At the bottom of theme options panel is a button called "options reset",  If you do not perform an options reset, then you will need to set the new options manually or you may experiecne layout issues.

## 7. Header Selections - Due to popular request, we've added the ability for users to select content for the various header areas.  **If you use header 2-5, your current content will be removed when updating**.  Go to the header tab in theme options, and choose your selections. You can now select what shows up in the top left & top right section. And header 4 has a unique section that also has different selections. All of this is selectd on the header tab in theme options.
